

Dataset Documentation

Amazon Prime Video User Analytics | Simulated Record-Level Data

1. About the Dataset

One row per subscriber (100 users, July 2026). The dataset is **simulated** to reproduce the totals and splits of the source Power BI dashboard, because real Prime Video data is proprietary. All KPI cards and cross-tabs in the report are computed from it.

Property	Value
Records	100 (30-row sample shown below)
Granularity	One row per subscriber
Period	31 days, July 2026
Format	PDF (this file) + CSV sample

2. Data Dictionary

Field	Type	Description	Values / Range
User_ID	Text	Unique subscriber ID	U1000 onwards
Age	Integer	Age in years	18 - 35
Gender	Category	Subscriber gender	Male, Female
Plan	Category	Subscription tier	Basic, Standard, Premium
Genre	Category	Primary genre watched	Sci-Fi, Comedy, Horror, Romance, Drama, Documentary, Action, Thriller
Rating	Decimal	Rating given (out of 5)	0 - 5
Device	Category	Main viewing device	TV, Mobile, Tablet, Laptop
Hrs	Decimal	Watch hours in the 31-day period	hours

3. Reconciliation Checks (Full 100 Rows)

Check	Value	Result
Sum of Age	2,651	Mean age 26.5
Sum of Rating	~400.1	Mean rating 4.00
Genre counts	8 genres	Sum to 100 users
Plan split	36 / 34 / 30	Standard / Premium / Basic
Gender split	58 / 42	Male / Female

Important

Only the 30-row sample published in the report appendix is included here. The remaining 70 rows are not part of the report, so the totals above refer to the full dataset and cannot be recomputed from this sample alone.

4. Sample Records (30 of 100 Rows)

User_ID	Age	Gender	Plan	Genre	Rating	Device	Hrs
U1000	33	Male	Premium	Romance	4.11	Tablet	181.9
